1305 Cumberland Avenue, Suite 100
West Lafayette, IN 47906

Dear Recruiting Manager,

I am interested in the electrical systems engineer position posted on Monster.com.

I have extensive experience in product test and development as well as quality engineering.

At IBM & JDS Uniphase, I helped develop and modify LabVIEW code for product integration and production testing. I also implemented data logging to MySQL and SQLite databases and automatic graph generation for easy data analysis to complement production testing. I developed a Visual BASIC program that automated product report generation by querying these databases and graphing product performance data versus product specifications. I also have experience developing C++ and Java applications as well as utilizing Matlab for data analysis. While working for Siemens, I performed quality engineering duties. I performed failure analysis of returned products and identified the root cause. I worked with development engineers to identify and implement corrective actions on the production line. I also performed ongoing quality control of product ramp up in anticipation of production line shut down.

At Siemens, I provided failure analysis and corrective action on returned products. I identified the root cause failure and communicated the issue and corrective actions to the customer. At IBM & JDS Uniphase, I helped develop and modify LabVIEW code for integration and production testing. I've also implemented data logging to MySQL and SQLite databases and automatic graph generation for easy data analysis.

The electrical systems engineer sounds like a wonderful opportunity, and I would welcome the chance for an interview to discuss your needs and outline my strengths in person. You may reach me at (507) 990-9052 or nick.klosterman@gmail.com. Thank you for your time and consideration of my resume. I look forward to speaking with you.

Sincerely yours,

Nick Klosterman
